DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 13 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Both of these claims refer to "the hydrous 3%" hydrogen peroxide solution, however, the limitation to 3% was not previously recited and therefor lacks proper antecedent basis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 8-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 19624095 Müller-Lierheim in view of Gaglia, Jr. U.S. patent No. 3,912,451 and Dziabo et al., U.S. patent No. 5,340,583.

Müller-Lierheim teaches substantially the apparatus claimed, a glass receptacle for receiving and immersing contact lens in an aqueous hydrogen peroxide solution. The receptacle has a platinum layer on the walls thereof, to decompose the hydrogen peroxide. The reference is silent as to the inclusion of a silver layer in addition to that of the platinum.

Gaglia, Jr. teaches the equivalence of both platinum and silver in hydrogen peroxide decomposition as used in a layer formed on the wall of a contact lens disinfecting container system. See column 3, lines 37-44.

Dziabo et al., teach the formation of a contact lens hold-down mechanism within a lens disinfecting container, with a non-leachable silver to provide antimicrobial activity. See column 9, lines 5-15 and claim 10.

It would have been obvious to one of ordinary skill in the art to include the provision of a silver layer, preferably on the lens hold down mechanism, within the system of Müller-Lierheim because of silver's recognized activity as both a decomposing catalyst for hydrogen peroxide and as an antimicrobial itself. It would further have been within the purview of one of ordinary skill in the art to determine an optimum amount of silver to be present because of the recognized concern for premature decomposition of hydrogen peroxide.
